

Easy Pole SKTR

To provide you with the correct Easy Pole for your Skeeter, we will need the angle measurement of the 1-1/2" square tube on your existing steps.

There are a couple ways to get this angle measurement.

1. Measure App on the iPhone

- a. Open the app and select "level" on the bottom of the screen.
- b. Hold your iPhone against the square tube on your skeeter steps and let it read the angle.

2. Digital angle finder.

- a. If you have access to a digital angle finder, you can zero the device out on the top of the skeeter steps and then hold the device on the square tube.
